**Amendments to the Specification:**

Please replace page 7, paragraph 3 with the following:

**Detailed Description of Preferred Embodiments**

Fig. 1 schematically illustrates a typical layout of a prior art network, such as the Internet. Users 111 to 115, 121 to 124, ~~etc.~~ 131 to 133, 141 to 143, 151 to 153, and 161 to 164 are connected to Internet Service Providers 110, 120, 130, 140, 150, and 160, which are connected to network 100. While Internet Service Provider (ISP) 110, which is located in the USA, is using proxy server 101, Internet Service Provider (ISP) 140 which is located in China, is not using a proxy server. Proxy server 101 stores temporary files that arrive at the server. The next time that server 110 receives a request to download a file that is already stored on the server, instead of downloading it from the location where it permanently resides, the proxy server will send the file in it.
